

Introduction:

InnStock is Innov8's leading edge handheld Stock Control Solution which seamlessly integrates with the Sage 200 suite.

Embracing Touch-screen handsets and bar code technology, InnStock provides fully integrated, time efficient stock control, and allows you to interrogate physical quantities of stock, accurately, real-time from your Sage 200 suite. Our handheld solution is user friendly, feature rich, and comes complete with the following functionality:

Goods In: Receive Delivery
 Put Away Stock
 Accept Returns

Picking: Pick an Order
 Produce Pack Label

Stock Control: Move Bay Contents
 Move Item
 Stock Take

InnStock provides real-time information to employees on the 'shop floor' whilst retaining full control of user access rights and security levels. Employees time is more efficiently utilised and stock accuracy is dramatically increased, therefore introducing overall efficiencies and potential cost savings to your fulfilment process. Also an overall reduction in paper processing ensures that the administrative workload of the business is greatly reduced.

Benefits:

Benefits which your organisation can derive from the use of the InnStock solution:

o More Flexibility

The system allows for more flexibility in the stock control element of the business by allowing the warehouse personnel to easily manage the stock levels in bins without the constant need to get the information updated manually.

o More Accuracy

The bins will always be synchronised with your Sage back office system. In short, you will obtain full accuracy of your stock. At the exact moment it is scanned, every time you pick or even move stock, each transaction is updated, real-time within the Sage 200 Stock file. This results in full accuracy of stock information with immediate visibility of any changes made.

o Save time - Increase efficiency

The use of handsets moves the administration of the system where possible to the shop floor. The use of Bar coded products improves accuracy in the pick, pack and dispatch of orders to customers thereby reducing the requirement to credit for wrongly dispatched orders.

Innov8's InnStock solution is built with the latest technologies. the system delivers real business value through easy and safe integration with your existing accounts and back-office solutions.

Inn Range

Key Features

o Goods-In Processing

Receive stock into the warehouse, either by capturing the barcode electronically or via the handset keypad using a quick entry grid. Line by line verification with the purchase order ensures complete accuracy is maintained.

o Flexible Picking of Stock:

Allows a user to either pick stock against individual Sales Orders or to work against a combined picking list covering multiple Sales Orders. The ability to combine Sales Orders into one pick enables a warehouse operator to bulk pick items which can then be split into the multiple Sales Orders that contain that item. This type of functionality works well in environments such as Wholesale or Retail where there is a requirement to pick high volumes of the same item.

o LIVE integration to Sage 200

The ability to provide LIVE integration to Sage enables key transactions to be validated within Sage prior to completion – for example, goods can not be dispatched via the handset if they are placed on hold within Sage.

o E-Commerce Integration

Provides integration to your e-commerce website, updating product information (stock levels, description) and exchanging Sales Order detail (downloading Orders and notifying when goods are shipped).

o Full Traceability

All stock movements are recorded and stamped with the transaction date, time and user details ensuring a complete audit trail is available at all times.

o Depot and Bin stock transfers

Quickly and easily move stock around your warehouse, whether that is individual bins or whole bays, while maintaining full movement history for each stock item.

o Comprehensive Stock Taking

The software supports full stock taking procedures, including cyclical stock takes which allows designated locations to be 'locked' for stock taking without affecting the entire warehouse.

o Packing of Stock

Stock can be packed into individual boxes or pallets, with each package being allocated a unique packing label containing a barcode to identify the Sales Order it relates to. Courier documentation can also be produced at this stage, reducing the amount of manual duplication.

o Powerful Dispatch Functionality

When an operator scans a box / pallet for dispatch, this integrates with the Sage 200 system to push the order to Ready to Dispatch automatically, removing any back office intervention on the dispatch of goods.

o Courier Integration

The software can communicate to your chosen couriers web based shipping tool, passing the detail of items ready for collection – removing the need for duplication and improving accuracy. At this stage, the system can also generate the designated shipping manifest for the courier.

The Intelligent Intermec Handsets support scanning, Bluetooth, GPRS and RF communications. Software supports Bluetooth for printing, scanning for product entry and GPRS, local cradle and dial up connection using a cradle for communications with the back-office.

Inn Range

Customers

InnStock has been designed to be flexible, easy to use and scalable. The solution is currently in use in many different businesses helping them more efficiently manage their stock.

A great example of an InnStock success story has been within Bombay Duck, the popular online retailer. Our Innstock tracks stock while seamlessly integrating with the Sage 200 Back office solution and their e-commerce site. The system even links into their couriers own systems and prints the labels for dispatch.

This combined solution allows them full control over order fulfillment. As well as automating many of their processes they also use the InnView product to extract custom views of their company information, orders and their statuses, giving them full control and visibility throughout their business processes.

"InnStock has really changed our business for the better. The solution provided by Innov8 integrates perfectly with our business needs and we have seen huge improvements in packing accuracy, efficiency and information. This has given us far greater visibility within our business and allows us to spend much more time looking after our customers." - Mr Ben Burch, Director, Bombay Duck.
